SINKS

archant.co.nz

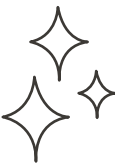

Live easier with Robiq

The Robiq range is a durable and modern stainless steel sink range. Upgrade your Robiq with partner products to make preparation, cooking and cleaning, so easy! Choose Robiq Ultimate for an entire collection of partner products or, choose Robiq Standard for an accessory collection that provides the essential partner products.

Why Robiq?

The sink is the most used accessory in the kitchen. With that in mind, we thought it would be helpful to highlight some of the more attractive models on the market. Perhaps you've never researched sinks before and are curious as to why these models are so popular. Our customers tell us it's the Robiq's unique blend of useful features and modern design that make it a best seller. It was created to withstand the demands of everyday family use while still adding a splash of style to your kitchen.

Quality .304 Grade Stainless Steel

Your Robiq sink is hand-made from the finest .304 grade stainless steel ensuring a durable and strong sink. The stainless steel is composed of 18% chromium preventing rust and corrosion and 10% nickel adding a lustre to the surface.

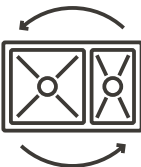

30 Years Peace of Mind

Peace of mind comes as standard with the Robiq range. Not just because it's designed and manufactured to the highest possible standards, it's also because of its 30 year warranty.

Undermount or Overmount Versatility

Each sink has generous flange size of 20mm which allows your fabricator to easily undermount your sink for a modern and minimal look. Or, the sink can be easily installed and fitted in the top mount position.

Reversible

For the ultimate in design flexibility and function, these double bowls offer reversible drain options. Increase the efficiency of your work space with the unique ability to customize your sink layout. The drain can be arranged on the left or right for your convenience.

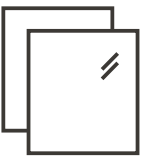

High-Capacity Overflow

The specially developed high-capacity overflow will prevent flooding if your tap is accidentally left on. Capable of draining 15 litres per minute (the standard is 12lt/minute) this is compliant with multi-level buildings.

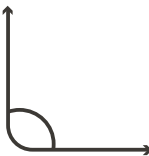

Quick Drain Lines

With four subtle-pressed drain lines, any water will quickly and easily drain away. This will reduce moisture keeping your sink and kitchen more hygienic.

Brushed Satin Finish

The stainless steel is finished in a luxurious Brushed Satin finish giving the sink a beautiful lustre and micro-thin layer. This protects the surface from heavy scratches and marking.

Easy-clean Corners

Your Robiq sink features a tight 12mm corner radius to give you a modern and squared look. However, the corners are rounded making it easy to wipe clean.

Suits Waste Disposal

With standard 90mm waste holes, you can fit a waste disposal unit to any sink. In some models, the waste is set to the rear also, giving you more cabinetry space below the bowl.
